# Activating your FibreNest service

When you see the screen below, click the 'Yes, it's blinking purple' button and wait whilst the app checks your internet connection.

LED indicator not blinking purple? Try performing a factory reset and starting again (refer to step 23).

First check that your Node is connected to your ONT as shown in the illustration below.

Once this has been confirmed, when you see the screen below in your Linksys app, tick all three boxes.

Once the change has taken effect you will be asked to re-connect your smart device to your newly named Wi-Fi network.

To do this, return to your device's settings and connect to the new Wi-Fi network, using the details entered in the previous step.

Once connected, switch back to the Linksys app and click the 'Next' button on the screen below to continue.

Activation page not loading, or just getting a blank screen? Try connecting to your new Wi-Fi network on a different type of device if possible. For example, try using an iPhone or a laptop if you are having problems setting up your node using an Android device (or vice-versa).

If you have tried this and are still having problems, try typing <u>http://</u> <u>servicecheck.fibrenest.com</u> into your web browser once you have connected to your WiFi Log in with the email address and password you used when you signed up for FibreNest and follow the on screen instructions.

#### **Congratulations**

Your Wi-Fi is ready!

### 23

#### Only perform this step if you experience any issues in configuring your FibreNest Node.

To perform a factory reset:

With the Node turned on, press **and hold** the 'Reset' button found underneath for at least 12 seconds.

The Node's LED indicator will turn red and fade in three pulses.

Do not release the Reset button until the light goes out and turns bright red.
